

## ABSTRACT OF THE DISCLOSURE

The invention relates to a fixing apparatus for preventing the laser beam of an indicating light pen from being out of focus with a lower shaft, an upper shaft, a light-emitting module, a cap and a fixing element. A laser head is disposed on the  
5 light-emitting module and is in connection with a focusing lens. The fixing element is positioned within the cap. Meanwhile, the laser head with the focusing lens is located within the cap for preventing the laser head from undesired offset. Therefore, it is not necessary to adjust the focus of the laser head and the cap by use of a rapid engagement, thereby achieving a convenient use.
